Prince Kumar P

Technology Lead · Senior Lead Software Engineer | Full Stack & Cloud

+91 9952293271 · princekumar27.cse@gmail.com · Chennai, India · linkedin.com/in/prince-kumar-7567b850

AT A GLANCE

Position under consideration	Technology Lead
Current organisation	Virtusa
Total experience	16 Years
Location	Chennai, per his CV. The submission records Coimbatore — worth confirming.
Role is based in	Coimbatore
Education	B.E. Computer Science — Anna University, Coimbatore (2004–2008)
Recognition	Technology Excellence Award, H1 FY23 — Virtusa (British Telecom account)

PROFILE SUMMARY

Prince Kumar is a senior full-stack engineering lead with sixteen years in enterprise software delivery, the last six and a half of them at Virtusa on the British Telecom account. He works across the whole stack — Java and Spring Boot and Node.js on the server, Angular and React on the client — and has spent the recent part of his career designing and leading cloud-native, event-driven systems on AWS rather than writing features within someone else's architecture.

His two most substantial pieces of work are both platforms rather than applications. The first is a visual API orchestration and transformation platform that lets users assemble and run API workflows through a drag-and-drop designer, built as Kafka-connected Java and Node microservices, containerised with Docker and run on Kubernetes, which he reports taking to 99.9% uptime. The second is a configurable ETL and migration platform that moved more than 200 database tables, files and S3 objects between legacy and modern systems with, by his account, zero data loss — again orchestrated through Kafka with a monitoring dashboard he also built.

Two things stand out beyond the delivery record. He has invested in production observability as a discipline — Prometheus, Grafana and Loki wired across services to watch JVM memory, GC behaviour and application performance, with real-time dashboards and anomaly detection, which is a level of operational care not everyone at this grade brings. And he leads: he mentored more than ten developers, set coding standards, reports a 100% promotion rate within his team, and resolved 40+ production incidents at a two-hour average. Earlier in his career at Treselle he built consumer-scale products — a market analytics platform tracking 1,000+ tickers for 5,000 concurrent users, and a travel booking platform integrating Amadeus, Sabre and Travelport for 10,000+ monthly users.

TECHNOLOGY PROFILE, AS STATED ON HIS CV

Angular	~9 years
Node.js	~7 years
Java / Spring Boot	~5 years
React	~5 years

AWS, Kafka, Docker, Kubernetes	Virtusa engagements, 2020 onward

CAREER AT A GLANCE

PERIOD	ROLE	ORGANISATION / FOCUS
Jan 2020 – present	**Senior Lead Software Engineer**	Virtusa Consulting Services, Chennai British Telecom account. Visual API Orchestration & Transformation Platform (Mar 2024 onward); Custom ETL Tool and Migration Dashboard (Mar 2020 – Mar 2024)
May 2013 – Jan 2020	**Senior Application Developer**	Treselle Systems, Chennai Discern, a financial and stock-market analytics platform; Rehlte.com, a flight and hotel booking platform
Oct 2012 – Apr 2013	**Senior Developer**	Congruent Solutions, Chennai
Nov 2010 – Sep 2012	**Developer**	AEL Data, Chennai

SUGGESTED GROUND FOR THE CEO CONVERSATION

- How he decides where a service boundary belongs, and when he has argued against splitting one.
- The orchestration platform: what he would build differently a second time.
- How he grew ten developers — what he changed about how the team worked, not just what he taught.
- What he wants from the next role that Virtusa could not give him.

Prepared 18 October 2026 from the candidate's own curriculum vitae. Interview feedback and commercial terms are deliberately excluded.

CURRICULUM VITAE AS SUBMITTED

Prince Kumar P

Senior Lead Software Engineer | Full Stack & Cloud

+91 9952293271 · princekumar27.cse@gmail.com · Chennai, India · linkedin.com/in/prince-kumar-7567b850

PROFESSIONAL SUMMARY

Senior Lead Software Engineer with 16 years of experience designing, architecting and delivering scalable enterprise applications, full-stack solutions and cloud-native microservices. Strong full stack expertise in Java, Spring Boot, Node.js, Express.js, Angular, React and AWS, with a record of building high-performance, resilient systems and leading engineering teams through the full delivery lifecycle from requirements and architecture through development, deployment and production support.

TECHNICAL SKILLS

BACKEND

Java (~5 yrs), Spring Boot, Node.js (~7 yrs), Express.js

FRONTEND

Angular (~9 yrs), React (~5 yrs), HTML5, CSS3

MESSAGING

Kafka

DATABASES

Oracle, MySQL, PostgreSQL

CLOUD & AWS

EC2, ECS, EKS, S3, Lambda, RDS, API Gateway, CloudFront, IAM, Route 53

DEVOPS & CI/CD

Docker, Kubernetes, Jenkins

MICROSERVICE COMPONENTS

Service discovery, API gateway, load balancing, resilience, circuit breaker, retry and rate limiting, config management, monitoring, metrics, logging

OBSERVABILITY

Prometheus, Grafana, Loki; memory management and performance analysis

OTHER

Salesforce migration (Bulk and REST API); Apache, Nginx, Tomcat; Git, GitHub, Bitbucket, AWS CodeCommit

EXPERIENCE

Senior Lead Software Engineer

Virtusa Consulting Services, Chennai

Jan 2020 – Present (6+ years)

Senior Application Developer

Treselle Systems, Chennai

May 2013 – Jan 2020 (6 years 9 months)

Senior Developer

Congruent Solutions, Chennai

Oct 2012 – Apr 2013 (7 months)

Developer

AEL Data, Chennai

Nov 2010 – Sep 2012 (1 year 10 months)

PROJECTS — VIRTUSA

Visual API Orchestration & Transformation Platform

British Telecom · Mar 2024 – Present

Java, Spring Boot, Node.js, Angular, PostgreSQL, AWS, Kafka, Docker, Kubernetes, JointJS.

- Designed and led development of a platform letting users visually design, configure and execute API workflows.
- Architected microservices-based pipeline orchestration, with transformation blocks for string and array operations and Kafka-based event-driven communication between blocks.
- Implemented service discovery, API gateway, load balancing, resilience, circuit breaker, retry and rate limiting, config management, monitoring, metrics and logging, improving platform uptime to 99.9%.
- Built production-grade observability with Prometheus, Grafana and Loki covering JVM memory and GC metrics, application performance and centralised logs.
- Built the visual pipeline designer in Angular with JointJS, supporting drag-and-drop API blocks with sequential, parallel, conditional and wait-based workflows.
- Containerised the microservices with Docker and deployed on Kubernetes for horizontal scaling at peak load.

Custom ETL Tool and Migration Dashboard

British Telecom · Mar 2020 – Mar 2024

Java, Spring Boot, Node.js, Angular, PostgreSQL, AWS, Kafka, Docker, Kubernetes, JointJS.

- Designed a microservices-based ETL and data migration platform with an integrated monitoring dashboard, migrating legacy systems across relational databases, files and S3.
- Built Java and Spring Boot microservices for block-level migration across 200+ database tables, files and S3 objects.
- Implemented Kafka-based event-driven communication for asynchronous processing, execution-status updates and completion events, achieving zero data loss across all migrations.
- Built Angular migration monitoring dashboards with charts, data grids, progress indicators and error visibility.

PROJECTS — TRESELLE SYSTEMS

Discern — financial and stock market analytics

Jan 2016 – Dec 2020

React, Node.js, MySQL, Highcharts, D3.js.

- Built an analytics platform covering publicly traded companies across retail, energy and real estate, tracking 1,000+ tickers in real time.
- Set up the React application architecture and built ticker watchlists and interactive charts, cutting dashboard load time by around 40%.
- Designed REST APIs and backend services for real-time market data, supporting up to 5,000 concurrent users.

Rehlte.com — flight and hotel booking platform

May 2013 – Jan 2016

React, Node.js, MySQL.

- Developed a Saudi-based booking platform on a microservices architecture serving 10,000+ monthly active users.
- Integrated Amadeus APIs for flight search and ticketing across 500+ airlines, plus secure payment gateways.
- Built reusable React components for search, seat selection, reservation, booking and payment, reducing average booking completion time by around 25%.

AWARDS AND EDUCATION

Technology Excellence Award (H1 FY23), Virtusa — British Telecom client. B.E. Computer Science, Anna University, Coimbatore, 2004–2008.
